

Experiment No: 1

Experiment No 1 1: Installation and Configuration of Flutter Environment.	
ROLL NO	38
NAME	Sanchit Mhatre
CLASS	D15-B
SUBJECT	MAD & PWA Lab
LO-MAPPED	

Aim: Installation and Configuration of Flutter Environment.

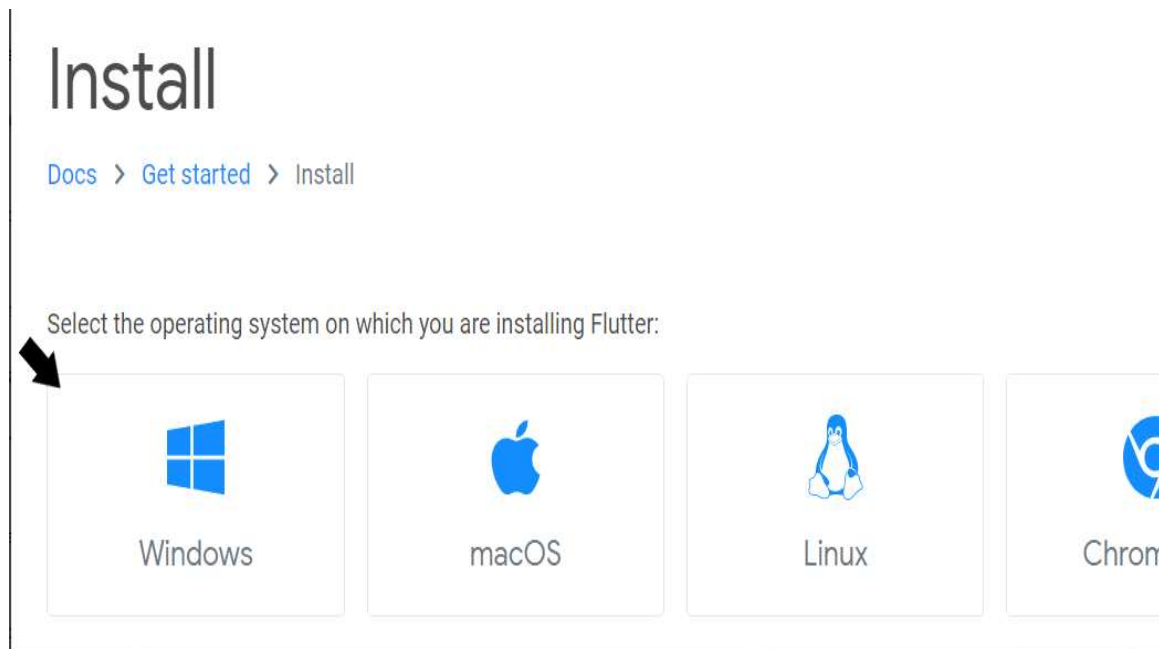

Theory: Flutter is basically Google's portable user interface

(UI) toolkit, used to build and develop eye-catching, natively-built applications for mobile, desktop, and web, from a single codebase. Flutter is free, open-sourced, and compatible with existing code. It is utilized by companies and developers around the world, due to its user-friendly interface and fairly simple, yet to-the-point commands.

Step 1: Download Flutter SDK

Visit the official Flutter website: <https://docs.flutter.dev/get-started/install>.

Click on the Windows icon to download the Flutter SDK.

Windows install

[Docs](#) > [Get started](#) > [Install](#) > Windows

System requirements

To install and run Flutter, your development environment must meet these minimum requirements:

- **Operating Systems:** Windows 7 SP1 or later (64-bit), x86-64 based.
- **Disk Space:** 1.64 GB (does not include disk space for IDE/tools).
- **Tools:** Flutter depends on these tools being available in your environment.
 - [Windows PowerShell 5.0](#) or newer (this is pre-installed with Windows 10)
 - [Git for Windows](#) 2.x, with the **Use Git from the Windows Command Prompt** option.

If Git for Windows is already installed, make sure you can run `git` commands from the command prompt or PowerShell.

Once downloaded, extract the zip file to your desired installation folder (e.g., C:/Flutter).

Get the Flutter SDK

1. Download the following installation bundle to get the latest stable release of the Flutter SDK:

`flutter_windows_2.2.3-stable.zip`

For other release channels, and older builds, see the [SDK releases](#) page.

2. Extract the zip file and place the contained `flutter` in the desired installation location for the Flutter SDK (for example `C:\Users\<your-user-name>\Documents`).

⚠ Warning: Do not install Flutter in a directory like `C:\Program Files\` that requires elevated privileges.

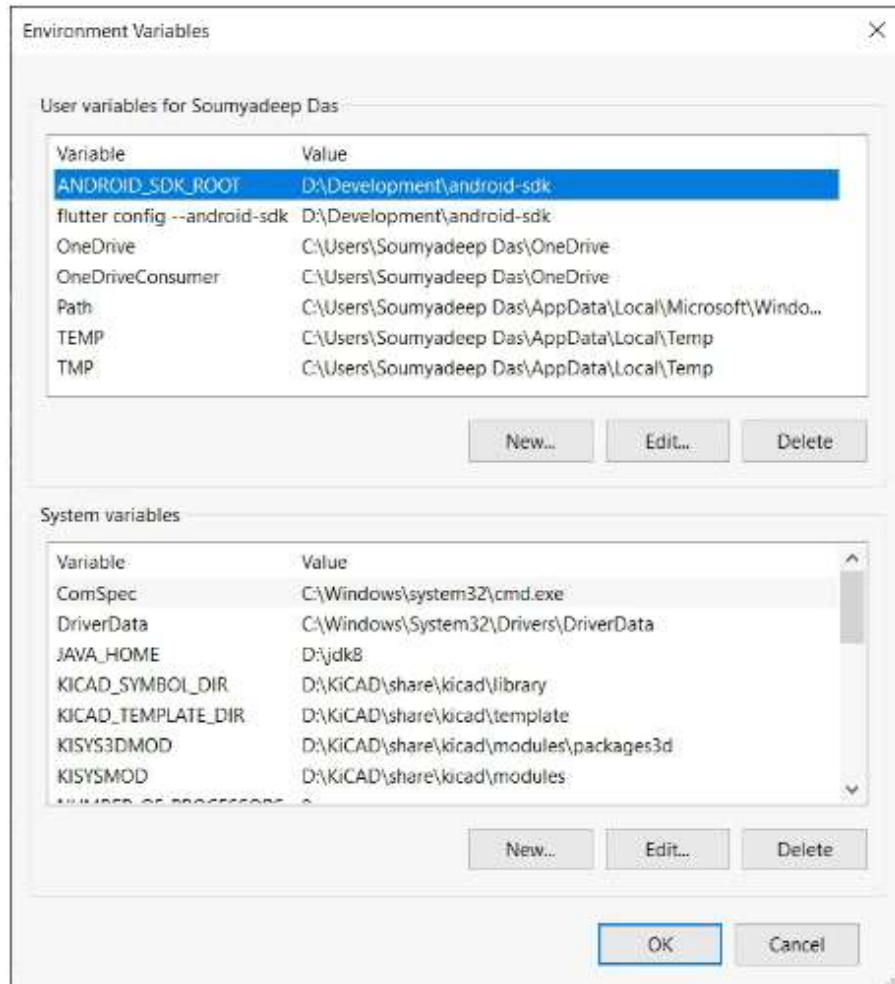

If you don't want to install a fixed version of the installation bundle, you can skip steps 1 and 2. Instead, get the source code from the [Flutter repo](#) on GitHub, and change branches or tags as needed. For example:

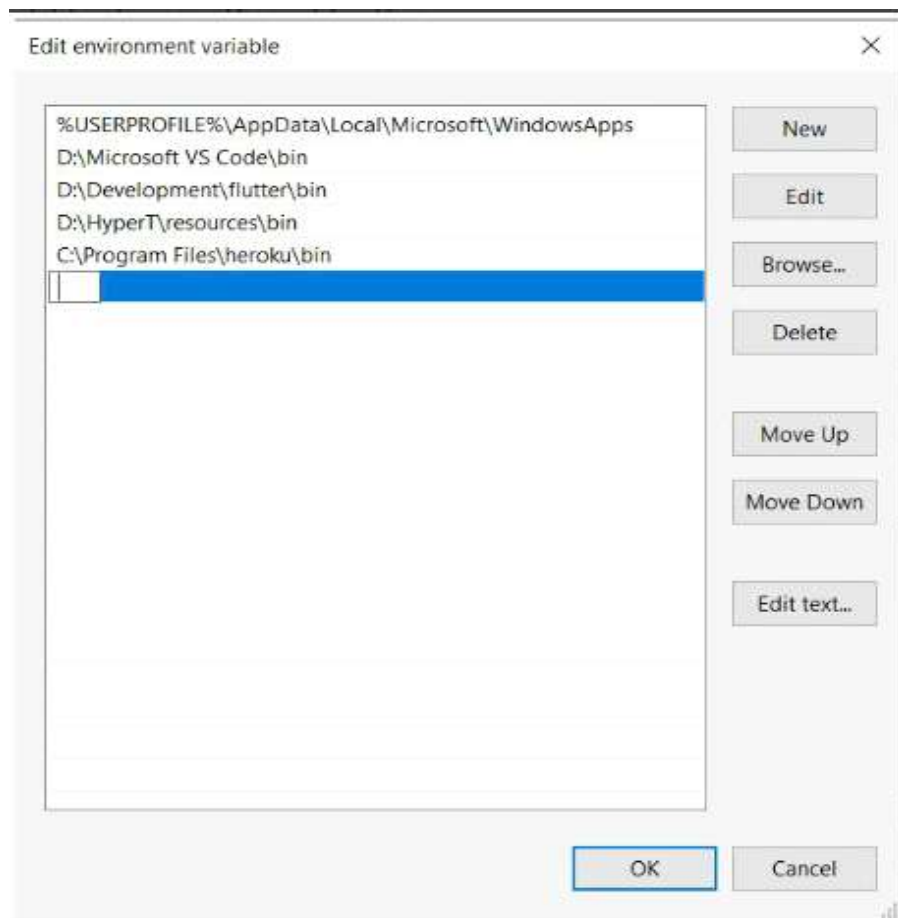

```
C:\src>git clone https://github.com/flutter/flutter.git -b stable
```

You are now ready to run Flutter commands in the Flutter Console.

Step 2: Update System Path

- Go to My Computer properties -> advanced tab -> environment variables.
- Select "path" and click on edit.
- Click on New and add the path of the Flutter bin folder (e.g., `C:/Flutter/bin`).
- Click OK in each window.

Step 3: Run Flutter Commands

Open the command prompt and run `flutter` to ensure the installation is successful.

```

C:\Users\Kaushik Kotian>flutter
Manage your Flutter app development.

Common commands:

  flutter create <output directory>
    Create a new Flutter project in the specified directory.

  flutter run [options]
    Run your Flutter application on an attached device or in an emulator.

Usage: flutter <command> [arguments]

Global options:
-h, --help                Print this usage information.
-v, --verbose              Noisy logging, including all shell commands executed.
                           If used with "--help", shows hidden options. If used with "flutter doctor", shows addi-
                           diagnostic information. (Use "-vv" to force verbose logging in those cases.)
-d, --device-id            Target device id or name (prefixes allowed).
--version                 Reports the version of this tool.
--enable-analytics         Enable telemetry reporting each time a flutter or dart command runs.
--disable-analytics        Disable telemetry reporting each time a flutter or dart command runs, until it is
                           re-enabled.
--suppress-analytics       Suppress analytics reporting for the current CLI invocation.

Available commands:

```

Run `flutter doctor` to check for any missing dependencies.

```

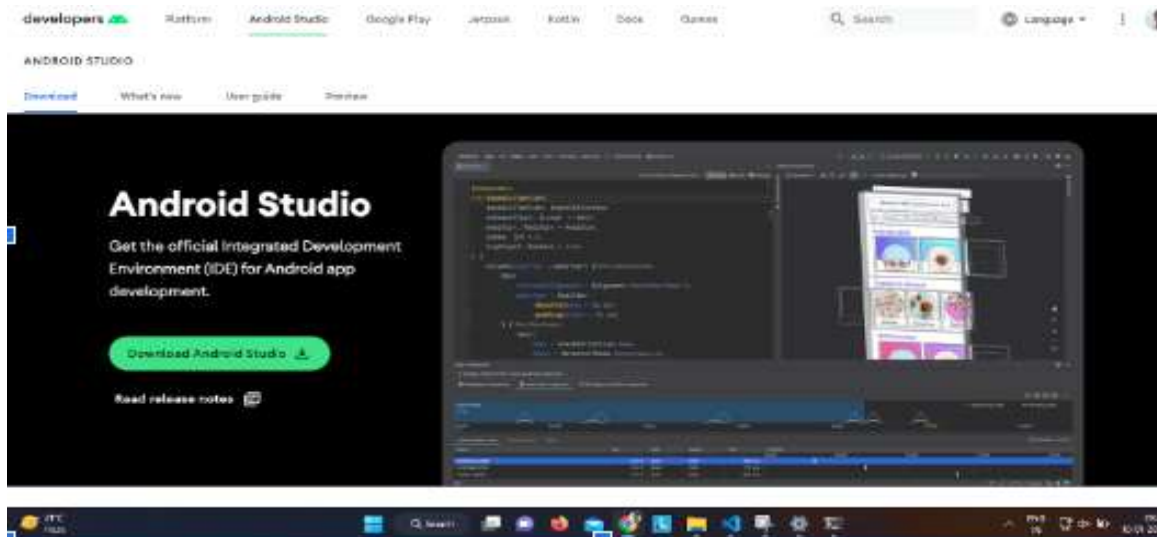

C:\Users\Student>flutter doctor
Doctor summary (to see all details, run flutter doctor -v):
[✓] Flutter (Channel stable, 3.16.7, on Microsoft Windows [Version 10.0.22000.2713], locale en-IN)
[✓] Windows Version (Installed version of Windows is version 10 or higher)
[!] Android toolchain - develop for Android devices (Android SDK version 34.0.0)
    X Android license status unknown.
      Run `flutter doctor --android-licenses` to accept the SDK licenses.
      See https://flutter.dev/docs/get-started/install/windows#android-setup for more details.
[✓] Chrome - develop for the web
[✓] Visual Studio - develop Windows apps (Visual Studio Community 2022 17.4.3)
[✓] Android Studio (version 2021.3)
[✓] VS Code (version 1.85.1)
[✓] Connected device (3 available)
[!] Network resources
    X A cryptographic error occurred while checking "https://pub.dev/": Connection terminated during handshake
      You may be experiencing a man-in-the-middle attack, your network may be compromised, or you may have mal-
      installed on your computer.
    X A cryptographic error occurred while checking "https://cocoapods.org/": Connection terminated during han-
      You may be experiencing a man-in-the-middle attack, your network may be compromised, or you may have mal-
      installed on your computer.
    X A cryptographic error occurred while checking "https://github.com/": Connection terminated during handsh-
      You may be experiencing a man-in-the-middle attack, your network may be compromised, or you may have mal-
      installed on your computer.

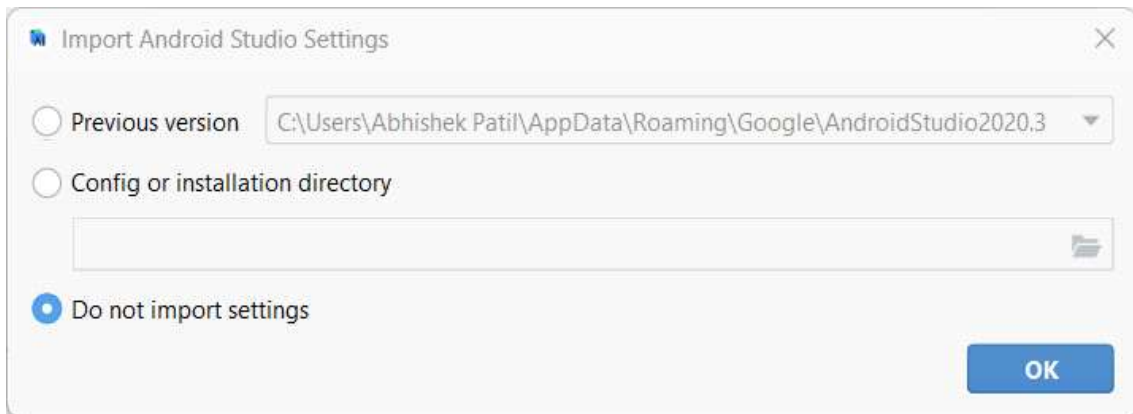

```

Step 4: Install Android SDK (if needed)

If Flutter doctor indicates a missing Android SDK, install Android Studio:

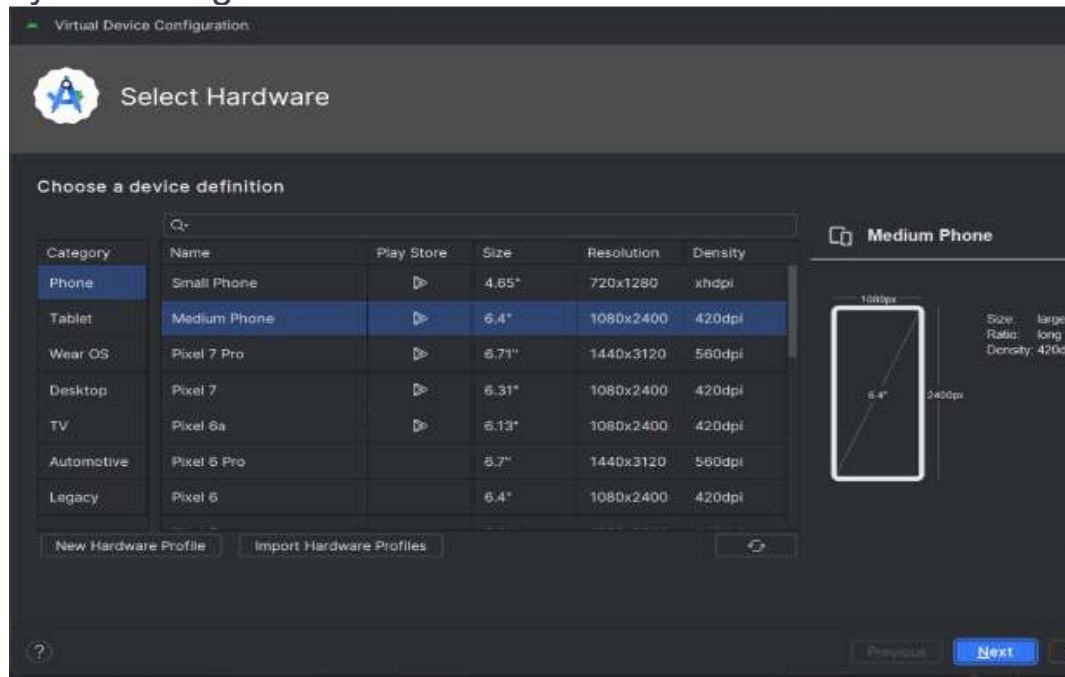

- Download Android Studio from the official site.
- Run the installer and follow the installation wizard.
- Launch Android Studio and complete the setup.

Step 5: Set Up Android Emulator

- In Android Studio, go to Tools -> Android -> AVD Manager.
- Create a Virtual Device by choosing a device definition and system image.

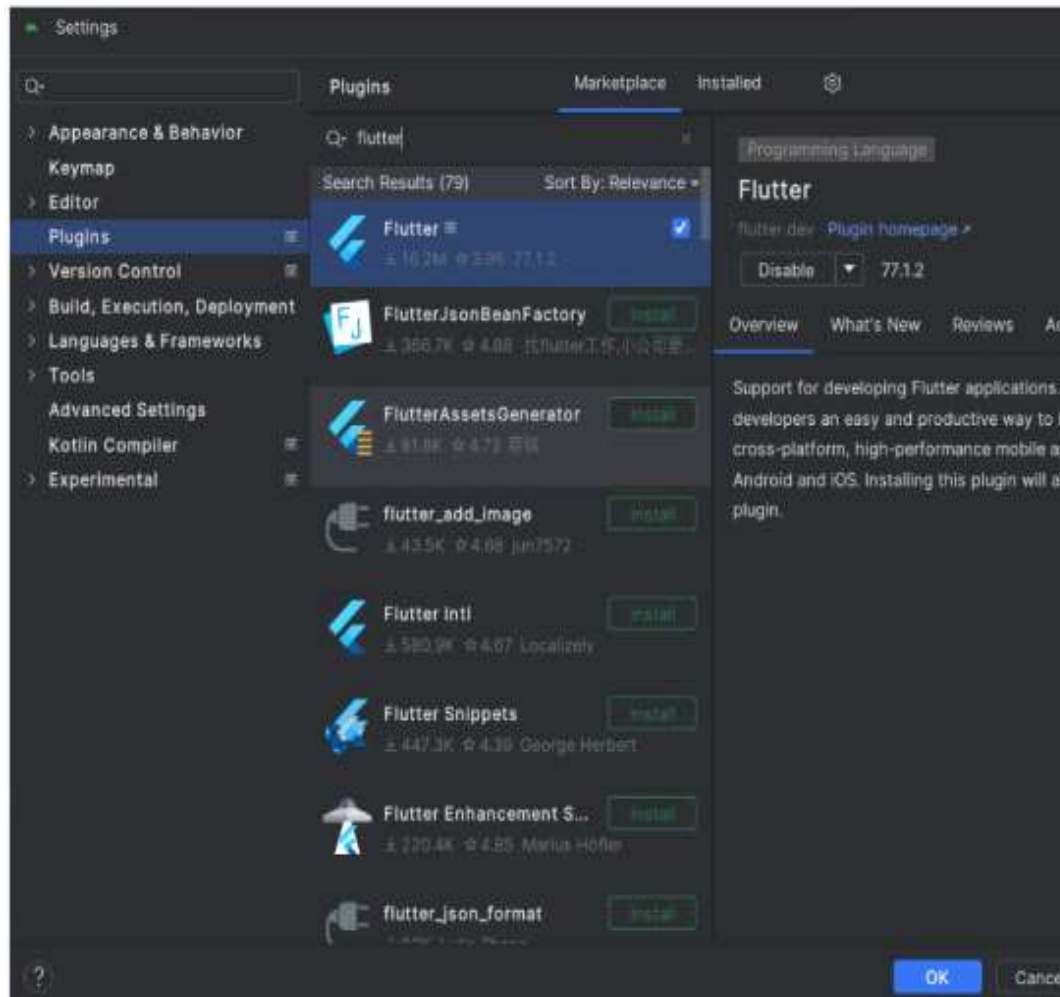

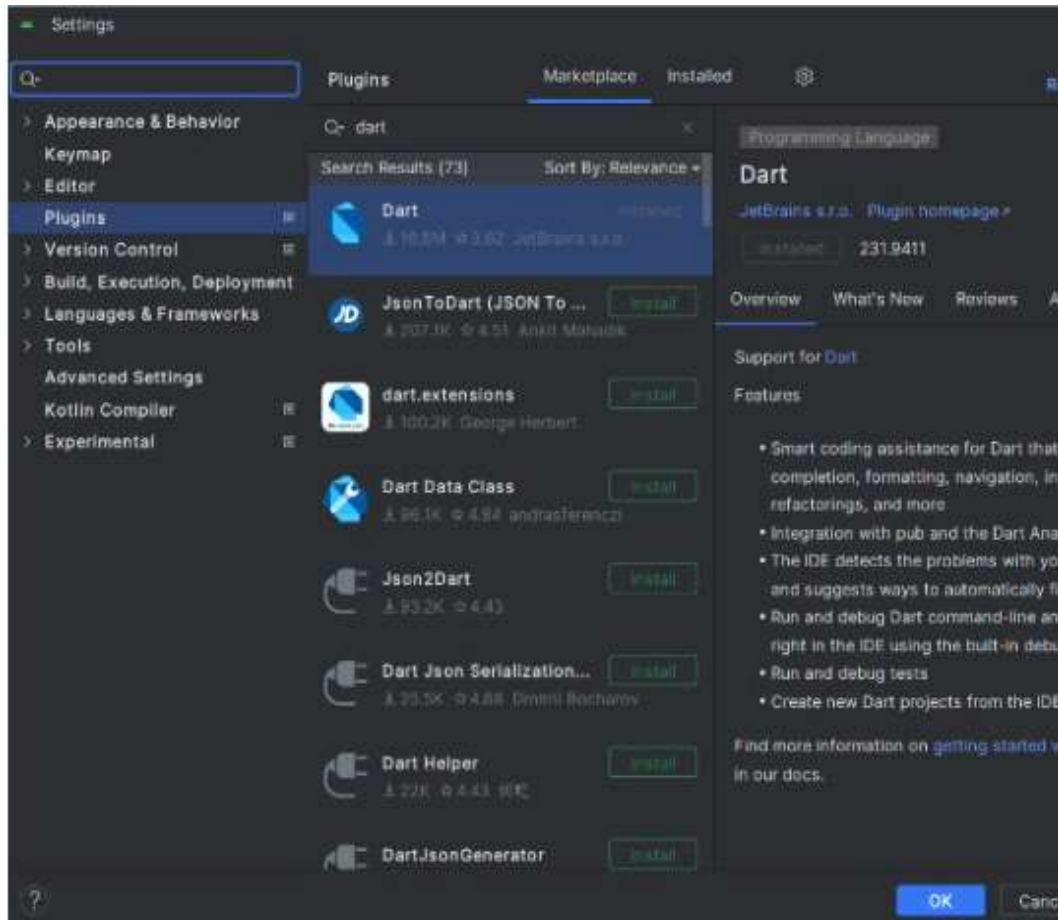

- Start the emulator.

Step 6: Install Flutter and Dart Plugins in Android Studio

- Open Android Studio, go to File -> Settings -> Plugins.
- Search for and install the Flutter plugin.
- When prompted, install the Dart plugin as well.
- Restart Android Studio.

Conclusion:

In this experiment, we successfully installed and configured the Flutter SDK, set up an Android emulator, and installed necessary plugins in Android Studio for Flutter app development.
